CANADIAN LAND DRILLING CONTRACTOR ON THEIR WAY TO INCREASING TOOL JOINT LIFE WITH DURABAND® NC PLUS TUNGSTEN CARBIDE (5 - 6 TIMES) OVER MILD STEEL AND TUNGSTEN CARBIDE

*Drilling location and
formations may alter results.*

Duraband® NC has been replacing traditional soft matrix mild steel wire in applications that require the maximum tool joint life in hostile environments. This drilling contractor, whose threshold for mild steel + tungsten carbide is typically 40,000 ft., has now exceeded this figure by 3X (120,000 ft.) with Duraband® NC + Carbide and reports that the deposit is only 40% to 50% worn. This translates to a maximum of 200,000 ft. to 240,000 ft. of drilling before re-application is considered.
